

Wi Fi Optimisation

Wi-Fi slow on the up-take?

Running multiple devices in your home or office can often result in drastically reducing the performance of your wi-fi reception. Dividing walls, multiple locations etc, all have a bearing on your signal.

Virair offer a free optimisation survey whereby we can greatly improve the service you receive from your existing broadband supplier.

Our wi-fi optimisation installations involve the use of inconspicuous signal boosting pods situated in one or more locations throughout the property.

Once installed, the benefits will be immediately apparent in both speed and service, plus our team can monitor and adjust the service in align with your requirements.

Wi-fi optimisation from Virair is subject to a monthly charge starting from just £9.99 for a single pod (based on an 18 month contract). This offers extremely good value for money and a small price to pay for seamless, buffer free broadband.

Remember, we offer a free no-obligation initial survey in order to gauge your specific requirements and installation of hardware is free of charge, subject to the minimum term of contract.

Call us today and book your **FREE survey.**

Speeds up to 100Mbps are available prices on request. All plans include unlimited data (subject to fair usage policy) dynamic IP address. Install is completed usually within 10 days of order.
